

Fun Worm Facts!!

- The only place where earthworms don't live are in the desert or where the ground is frozen.
- Earthworm poop is called 'castings'.
- Worms have two layers of muscles ~ one that runs lengthwise and one that runs around, helping its body stretch and contract.
- Worms have a coat of slimy mucus that helps them glide through the dirt.
- Sunlight can kill a worm because they are sensitive to the UV radiation.
- Worms are sensitive to temperature and touch.
- Worms do not have ears, rather they 'hear' by sensing vibrations.
